JiFi Notes are a first screening of the vast number of unresearched Asian small caps in an attempt to filter out quality companies. It is not designed as an exhaustive research report and will require further work before a major commitment is made by a risk-averse investor. Small caps are inherently volatile and understanding the sensitivity and drivers of the business and its environment is more important than a one-shot forecast of next year's numbers. Hence, there is no forecast; this note is a business rather than financial analysis of the company. A JiFi Note does not imply that the stock will be covered on an ongoing basis.

It is ...

Primarily involved in manufacturing polyester filament yarn (PFY) and nylon tyre cord fabric (NTCF).

It is not interesting because ...

- International prices of Century Enka's major business, PFY, are falling, while domestically overcapacity reigns. Besides, small capacities have meant uneconomical scale of operations. Its oncedominant position in the PFY business has given way to declining market share. Additional capacities from a merger with Rajashree Polyfils will only add to its woes.
- Squeezed margins are reflected in an already-low RoE which is expected to decline further in the next two years.
- Although Century Enka's management, the B. K. Birla management, well respected, it quotes at unjustifiably high PER. Moreover, it will have a negative profit growth in FY98 and FY99.

Key extended the rors

 Polyester ya notion: Inasmuch as cotton is a substitute for polyester, if poses a threat to polyester demand. However, polyester is making a come back (especially in countries with large populations) as declining prices make it a more attractive buy to cotton.

JiFi Notes are a first screening of the vast number of unresearched Asian small caps in an attempt to filter out quality companies. It is not designed as an exhaustive research report and will require further work before a major commitment is made by a risk-averse investor. Small caps are inherently volatile and understanding the sensitivity and drivers of the business and its environment is more important than a one-shot forecast of next year's numbers. Hence, there is no forecast; this note is a business rather than financial analysis of the company. A JiFi Note does not imply that the stock will be covered on an ongoing basis.

It is ...

Primarily a manufacturer of auto electricals for 4-wheelers and 2-wheelers, as well as spare parts. It is the biggest supplier to Maruti Udyog, the largest car manufacturer. New customer, Honda SIEL, will account for 4% of net sales in FY98 and 17% in FY99.

It is interesting because ...

- It has a high market share in auto electricals. It raised its market share (53% vs 47% by Lucas) from volume growth of Maruti Udyog (Esteem and Zen) and Hero Honda's range of 2-wheelers.
- Technical collaboration with Denso, Japan, ensures quality products. Denso, Japan and ASMO have raised their stakes from 45.3% to 51%, showing that the technical collaborator is financially interested.
- Denso India's stock has been quoted at a steep premium to the SCI. But a slowdown in the economy in FY97 will see sales of passenger cars falling in 1H FY98. Maruti Udyog's production capacity will rise in Fy99 as it is setting up a new plant. Overall volumes should improve in FY99, and will gain from indigenisation; currently 3% of raw material and components are imported.
- More indigenisation, volume growth and Maruti Udyog's increased capacity in FY99 will see improved margins. But we feel the share price will soften mid-term because of a possible negative EPS growth in FY98F. With the fluctuating currency rate, the share price could fall even further. Denso India's share price has slipped recently because of lower RoE and RoCE in FY97 over FY96.

Key external drivers

- GDP growth: A slowdown in economic growth will see fewer automobile sales. Hence, a slowdown in auto ancillaries is inevitable. However, car sales are expected to pick up in FY99 after a lag period as GDP growth is expected to be around 7% in FY98F.
- Interest rate: As interest rates ease, auto financing will pick up and this results in volume growth. Interest rates in India have recently slipped.
